

## DESCRIPTION

The CM Storm Recon is a high quality gaming mouse with a durable super grip coated ambidextrous body. It's based on the latest Avago 3090 optical sensor with 800 to 4000 DPI resolution, and is the first optical mouse with Lift-Off-Distance adjustment. The Mousewheel backlight color and all buttons can be programmed, allowing users to create and store up to 5 profiles and 36 macros on the mouse itself.

### Max Customization

Recon features 3 individual multi-color LED zones, the Mousewheel, DPI Buttons and CM Storm Logo. The brightness and color of each zone can be fine tuned, or simply disabled.

### Rubberized Grip

To improve the grip and prevent your fingers from sliding and slipping, the entire mouse body is coated in a thin layer of rubber. An added bonus is a super smooth comfy feel and look, guaranteeing approving nods by whoever lays eyes on it.

### On-The-Fly tuning

Quickly switch between different USB polling speeds, LOD levels and sensor DPI settings without leaving the virtual Battlefield or being distracting and catching a bullet.

### Precise Tracking

Thanks to the best Optical Sensor on the Market (Avago 3090) The CM Storm Recon tracks movements with the highest optical sensitivity on the market. Users can fine tune the sensitivity and define up to 4 DPI Levels for each Profile.
