

## Low-friction, high-performance mouse mat optimized for gaming sensors.

The surface of the MM400 is made of a high-quality, long-lifespan polymer. It's tuned to deliver outstanding glide characteristics without sacrificing control, allowing for both consistent snap targeting and pixel-precise shots. The tuned microtexture surface is optimized for gaming sensors, so you get a better glide feel without sacrificing control or accuracy.

The CGMM400 is stable and secure. You can't afford to have your mouse surface move in the middle of a firefight, so we added a no-slip base that provides cushion with just the right amount of give. And it's made of natural rubber, so it doesn't have a harsh chemical odor.
