

Great gaming sound with a comfortable, closed-back design

The Corsair Raptor HS30 analog gaming headset offers impressive sound quality and a noise cancelling microphone in a comfortable, closed back design that's great for extended gaming sessions. It features 40mm Neodymium audio drivers for better sound quality, and the padded earcups and headband give you the comfort you need to keep your head in the game.

40mm Neodymium drivers for better audio quality

The large diameter drivers are equipped with high-sensitivity magnets for better sound with lower distortion.

Circumaural, closed-back design

The earcups fit around the ears to help block distracting environmental noise, and the solid outer shell helps prevent bothering others when you're playing or listening.

Noise cancelling microphone

The microphone automatically screens out background noise, so you can be heard clearly.

Padded earcups and headband

Extra comfort, so you can keep your head in the game longer without your gear getting in the way.

Dual 3.5mm audio connectors for compatibility

The HS30 works with any PC or Mac with standard 3.5mm connectors for audio output and microphone input. It works with both sound cards and built-in audio connectors, on both desktop PCs and notebooks and laptops.
